

# <5°C storage facility

---

We try to keep the humidity at 20-30% and the temperature set at 4°C but this can vary greatly over the seasons.

*1671-015: Intended for smaller soil or sediment material and water samples.*

*1674-013: Intended for larger material and sediment cores (marine as well as terrestrial).*

1. Cooling facilities are for **short term storage of geological samples only**.
2. Keep the room and the entrance **tidy and clean**. Spills on shelves or floors must be removed immediately.
3. **Use plastic boxes for all smaller items**, no single/loose samples, bags or bottles.
4. All **boxes and larger sample items** should be **labeled with date, name and contact info of the owner** using a marker. For external samples, please add the **name and contact info of the responsible employee** at Geoscience to the label. Markers, laminated sheets and extra bags are stored at the entrance.
5. **No wood, paper or cartridge boxes, and no pieces of paper with information**, they support mold.
6. Use **air-tight containers or wrap your items in material of suitable size** to avoid cross-contamination between samples.
7. Any irregularities regarding accessibility, temperature, humidity etc. must be reported to the lab manager.

**Samples store incorrectly are discarded, without further notice.**
